How to play classic PC games in Windows 7 If you want to make your classic game running on a modern PC, you'll have to become familiar with DOSBox, a fully configurable DOS PC emulator that is absolutely necessary for getting nearer-Windows XP games up and running. The first step is to download a copy of DOSBox that will run on your machine. Head over to the DOSBox download page and pick up a copy for your operating system of choice. For the purposes of this guide, we will assume that you are running Windows and must download the Windows-compatible DOSBox version of 0.74. Install DOSBox anywhere you, please, and then set up a specific folder for all your old DOS game folders with a short name that is easy to remember, such as C:\DOSGAMES. Create a separate folder in the DOSGAMES directory for each game you want to play, but make sure to keep all worksheets as short as possible. In the days of DOS, all files were required to conform to an 8.3 naming strategy (eight characters before the period, three characters after), so for the sake of the simplicity of keeping all your worksheets within eight characters or less if you will run them in DOSBox. Since DOSBox emulates an Auto-include version of DOS on your desktop, you need to mislead it into thinking that your DOS game folder (C:\DOSGAMES) is really your root C:\ drive. To do this, you have to mount the DOSGAMES folder as a virtual hard drive. Double-click the DOSBox runtime in your Start menu, and when you see a black box with a Z:\ prompt, type the following command: mount c:\dosgames. This tells DOSBox to process the folder C:\DOSGAMES as the root C:\ drive. To get the new C:\ drive (or any drive, for this question), simply type c: in the Z:\ prompt. This action will put you in the C:\ drive (which is actually C:\DOSGAMES), and from there you can navigate to any of your game registrars by typing cd by the folder name. CDs stand for directory changes, and you can use it to navigate to any directory on your hard drive. For example, if you have a copy of Duke Nukem 3D on your hard drive in the folder C:\DOSGAMES\DUKE3D, you can play the game by typing cd duke3d to move to the folder and then type the name of the executable (in this case, duked) to run the game. You'll have to rent the proper directory every time you start DOSBox, which can become a pain if you're just running the same programs over and over again. Here's a shortcut: Open up the dosbox.conf file in your DOSBox directory, scroll down to the [autoexec] section, and add the following lines of code: mount c:\dosmesgasc:\ This way, DOSBox will default to your game folder whenever you start it up. Enjoy your classic game all over again, and stay tuned for more DOSBox tips and tricks. Note: When you buy something after clicking link to our article, we can earn a small commission.
